

Reference design: every block is a placeholder named by the common type of part that goes there.
Replace each placeholder footprint with the footprint of the chosen part; the nets do not change.
J1 is the module half of the host connector (PBS-HW-CON-01): contact pads on the back, centred on the module base.
Fit: 'Class M only' parts are omitted in Class H; U24 is fitted in SCM-L, JP1 in SCM-S.
Heaters H1 and H2 are film heaters bonded to the back of the board, either side of J1.
